Career Objective

B.E. graduate in Information Science and Engineering with a foundation in Java, JavaScript, React.js, Object-Oriented Programming, Data Structures and Algorithms, and SQL. Experienced in developing web applications, Android applications, and backend services through projects and internships. Seeking Software Developer, Associate Software Developer, or Associate Software Engineer roles.

Education

B.E. – Information Science and Engineering *2022 – May 2026*
S J C Institute of Technology, Karnataka CGPA: 8.26/10
Degree completed in May 2026.

Technical Skills

Programming Languages: Java, JavaScript, SQL
Core Java: OOP, Classes and Objects, Inheritance, Polymorphism, Abstraction, Encapsulation, Exception Handling, Generics, File Handling
Databases: MySQL, MongoDB, Firebase
Backend: Node.js, Express.js, REST APIs
Frontend: HTML5, CSS3, JavaScript, React.js
Tools: Git, GitHub, VS Code

Web Development Skills

HTML5 and CSS3

- Developed structured web pages using semantic HTML elements, headings, forms, tables, lists, and hyperlinks for navigation between pages and external websites.
- Styled web pages using CSS selectors, the box model, margins, padding, borders, colors, typography, and background properties.
- Created responsive layouts using Flexbox, CSS Grid, media queries, and relative units for different screen sizes.
- Implemented interactive visual designs using pseudo-classes, transitions, positioning, and reusable CSS.
- Organized web pages using reusable styles and consistent layouts to improve readability and usability.
- *Practice:* Created static webpages inspired by Netflix, RedBus, and YouTube.

JavaScript

- Practiced variables, data types, operators, conditional statements, loops, and functions.
- Worked with arrays and objects, including array methods, object properties, destructuring, and spread syntax.
- Used DOM and BOM features to access and update page elements, handle browser events, and interact with browser APIs.
- Implemented event handling for form submissions, button clicks, keyboard input, and other user interactions.
- Worked with Promises, async/await, and Fetch API to handle asynchronous operations and API responses.
- *Practice:* Created dynamic projects such as OTP Validation and Counter App.

React.js

- Used props to pass data between components and explored prop drilling across component hierarchies.
- Built functional components using React Hooks, including `useState`, `useRef`, `useContext`, `useReducer`, and `useEffect`.
- Managed component state, user input, and form data using controlled components and event handlers.
- Created reusable UI components and used conditional rendering, list rendering, and keys to display dynamic data.
- Practiced effect handling, Context API, and state management for interactive single-page applications.

SQL

- Practiced SQL commands for creating, modifying, and managing database tables, including DDL, DML, and DQL operations.
- Retrieved and filtered records using `SELECT`, `WHERE`, `ORDER BY`, `DISTINCT`, and `LIMIT`.
- Used aggregate functions such as `COUNT`, `SUM`, `AVG`, `MIN`, and `MAX` with `GROUP BY` and `HAVING`.
- Queried related tables using `INNER JOIN`, `LEFT JOIN`, and other join operations.
- Practiced subqueries and database constraints, including primary keys, foreign keys, `NOT NULL`, `UNIQUE`, and `CHECK`.

Projects

ShopMoree – E-commerce Website *In Progress*

- Developing an e-commerce website using React.js to provide an intuitive online shopping experience.
- Building reusable components for product listings, product details, navigation, and shopping cart interfaces.
- Implementing dynamic product rendering, interactive UI elements, and state management for cart operations.
- Working toward responsive layouts and a user-friendly shopping flow across desktop and mobile devices.

MyCloud – Private Cloud Storage System

- Designed a client-server cloud storage architecture for remote file management and transfer.
- Developed backend services for remote file access and file streaming through REST APIs.
- Implemented storage and communication mechanisms for a private cloud simulation.

Sahyadri-Samrakshane – Forest Sentinel App

- Developed Android application features to report forest fires, landslides, illegal tree cutting, and wildlife sightings using Kotlin and Jetpack Compose.
- Integrated Firebase, CameraX, and Google Maps API for alert reporting, image capture, and location support.
- Applied MVVM architecture, Room database, and background synchronization to support offline-first usage.

Internships

JSpiders – Full Stack Java Training / Internship

- Learning Java programming, object-oriented concepts, and full-stack application development through practical work.
- Practicing frontend development with React.js and backend development with Node.js, Express.js, and JSON.
- Building projects to strengthen programming, integration, and debugging skills.

Android App Development Intern (GenAI) – MindMatrix *Feb 2026 – Apr 2026*

- Developed Android application features using Kotlin, Jetpack Compose, and Generative AI technologies.
- Implemented application components and backend connectivity while participating in development and testing.

Core Concepts

Object-Oriented Programming, Data Structures and Algorithms, Time and Space Complexity, Database Management Systems, Client-Server Architecture, REST API Design, Authentication, Problem Solving, Agile Development.

Certification

Oracle Fusion AI Agent Studio Foundations Associate – Oracle (1Z0-1145-1)

Coding Practice

LeetCode: 80+ problems solved across Easy, Medium, and Hard difficulty levels.
